

Consulting: DevOps

Scope of Work:

Leverage NetSuite cloud platform for the development of a custom distribution services application to calculate employee and contingent worker pay for parcel delivery duties. Gap fit solution developed and implemented to support functionality not available in legacy ERP.

Results and Outcomes:

The application of this innovative service analysis process:

- Application was designed, configured, developed tested and implemented in 6 weeks. A reduction of 83% over similar development cycles developed by client.
- Reduced payroll processing for contingent worker pay by 84%.
- Created a central, automated, real-time reporting solution for performance analytics monitoring.
- Eliminated manual time calculation processes for all national distribution centers.

Innovation and Best Practices:

- Established a Proof-of-Concept platform for testing alternatives to SAP.
- Developed and implemented custom Netsuite code scripts for logistics route management.
