

Delivering Global Health Supply Chain Solutions to the People of Uganda

USAID
FROM THE AMERICAN PEOPLE

With more than 15 years of international service delivery and business consulting experience, Vignetic has had engagements in Hong Kong, EU, Mexico, and, most recently, East Africa. We are currently engaged in a five-year contract supporting USAID Uganda in delivery of an NMS+ ERP solution, designed for supply-chain optimization, enterprise integration and transparency. The robust, scalable and high-availability ERP solution will make NMS+ a pivotal system for procuring, storing and distributing Essential Medical Health Supplies (EMHS) to the citizens of Uganda throughout a network of 3,500 Health Facilities.

The Vignetic NMS+ team, based in Entebbe Uganda, consists of regional team members from Uganda, Kenya, South Africa, as well as France and the Philippines, all supported by our U.S.-based PMO (Project Management Office). The three-pronged procurement of hardware, software integration and change-management partners has aligned personnel from Uganda MoH, National Medical Stores, Vignetic and other partners to drive best practices and ensure that cultural sensitivities inform program decisions.

Sustainable Solutions for Long-term Capacity, Scalability and Growth

Vignetic has always been committed to invigorating growth of the people and clients that we serve. It is our core belief that as the individual grows, so does the community, company, and country in which they live. Regardless of whether it is a domestic or international project, Vignetic delivers sustainable solutions that build long-term capacity, scalability and accelerate growth.

"It is our core belief that as the individual grows, so does the community, company, and the country in which they live."

Michael Rose
President, Vignetic

U.S.-Based PMO Strengthened Through Regional Partners and Global Team Members

Since being awarded the direct, full and open contract with the USAID Uganda Mission, Vignetic has partnered with regional software, change management and institutional organizations to complete critical phases of the NMS+ project implementation. At the direction of USAID and the Uganda Ministry of Health, we focused on knowledge transfer, capacity building and scalability throughout the solution delivery process to ensure that the Ugandan people receive a sustainable system that they can fully support, maintain and optimize.
